NATIVE MONITORING FOR IBM AIX

AIXBeat

Close the AIX blind spot.

AIXBeat is a lightweight agent built for AIX that brings your **performance data, logs and security events into Elasticsearch**, so AIX shows up next to the rest of your estate.

Supports AIX 7.1 through 7.3 on IBM Power

WHAT IT BRINGS INTO VIEW

Performance
CPU, memory, disks, network and partition usage

Logs
System, error and boot logs, plus your app logs

Security events
Audit trail, logins and file-integrity changes

THE PROBLEM

AIX runs your most critical work, and it's the one platform your monitoring can't see.

- Modern observability tools are built for Linux, Windows and cloud; AIX gets left out.
- Teams fall back on separate tools, scripts and a handful of experts.
- Security and audit events from AIX rarely reach the security team's tools.

WHAT WE DO

One small, signed agent per host. Your data, in the tools you already use.

Install AIXBeat on each AIX system and it streams metrics, logs and security events to Elasticsearch, Logstash, OpenTelemetry or syslog, several at once if needed. Ready-made Kibana dashboards put AIX in the same view as everything else.

HOW IT WORKS

AIX hosts
Your IBM Power systems

→

AIXBeat
One signed agent per host

→

Your pipeline
Elasticsearch, Logstash, OpenTelemetry, syslog

→

Kibana
Ready-made dashboards

WHAT YOU GET

AIX alongside everything else
The same people, searches, dashboards and alerts now cover your Power estate too.

No lost data during outages
Events wait safely on the host and resume where they left off after an outage or restart.

Won't disturb critical workloads
Lightweight, with built-in limits that keep it out of the application's way.

Secure and signed
Encrypted connections, signed releases, least privilege and a FIPS-validated option.

WHY US

- **Native to AIX.** One self-contained program, with no extra runtimes to install or patch.
- **Fast fleet rollout.** Automated deployment across many hosts, a manual install in minutes, one-step rollback.
- **Backed by Mentat**, the elite automation and observability team that built it.

WHO IT'S FOR

IT operations for IBM Power · Elastic / Kibana teams · Security operations (SOC) · Banks, insurers & government · Regulated industries

Any organization still running important workloads on AIX that wants it in the same observability and security view as the rest of its estate.

Available now from Mentat.

Evaluation builds, pilots and licensing for your AIX estate.
